

The Village of Clinton 2016 Annual Summary
For the Energy Optimization and Renewable Energy Plan

In October of 2008 the Michigan Legislature passed Public Act 295 which is referred to as the "Clean, Renewable and Efficient Energy Act". This Act aims to help Michigan residents reduce their energy needs and requires all Michigan electric utilities to file an annual summary to its customers. The Village of Clinton continues to meet the State of Michigan renewable and energy optimization requirements of 2008 PA 295.

This report summarizes the Village of Clinton's efforts for both Energy Optimization and Renewable Energy for 2016.

Energy Optimization

In 2016, the Village of Clinton continued its Energy Optimization program with the distribution of energy saving compact fluorescent light bulbs (CFLs). In addition, 35 streetlights were upgraded to LEDs. The total cost of this program was \$20,269 and customers saved 192,093 kilowatt hours.

Renewable Energy

To meet the state mandated renewable energy goals for 2016 the Village purchased 2,340 Renewable Energy Credits (RECs). The credits from the UP Hydroelectric Power Purchase Agreement offset the costs of these RECs and left a credit of \$501.02. The Village has met the state requirement of 10% renewable energy.

A copy of the 2016 Energy Optimization and Renewable Energy annual reports are available for review at the Village office and online.
